

presenting means are arranged for varying the presentation speed within approximately 240%.

9. (Amended) A method for reproducing a multimedia signal, said method comprises presenting the multimedia signal to a user, characterized in that the method further comprises determining a delay measure representing an arrival delay of packets carrying the multimedia signal, and in that the method comprises changing the presentation speed in dependence on said delay measure within approximately 240%.

11. (Amended) The method according to claim 10, characterized in that the multimedia signal comprises an audio signal, and in that the method comprises varying the presenting speed of the audio signal without substantially changing a perceived intonation of the audio signal.

13. (Amended) The method according to claim 12, characterized in that the video signal is represented by at least one object, and in that the method comprises varying the presentation speed by adjusting a movement speed of at least one object in the video signal.

Please add the following new claims:

14. The arrangement according to claim 1, wherein the delay determining means measures a delay of the packets by comparing timestamps of the multimedia signal.
